Where efficiency counts

About CNS Electrical

CNS Electrical prides our work on giving 100% customer satisfaction. CNS employees are fully trained to satisfy your business needs. Our core business is set in the commercial market, with ongoing contracts maintaining public and private schools, shopping centres, industrial workshops and office blocks. We provide a service that other companies can't, reducing energy consumption in your business, keeping you up to date with new government working safety protocols and around the clock maintenance. CNS Electrical take care of it all, allowing you to concentrate on your core business.

CNS Electrical are the electrical maintenance, data communication and reduction in energy consumption specialists. We pride our business on delivering the highest quality work standards, whilst providing a cost-effective approach for your business. With extensive experience in the electrical and data communications industry, we are able to provide up to date, state of the art solutions to your electrical needs.

With ongoing electrical maintenance contracts within the government schooling and public sectors, the CNS Electrical team are proud to present a one hundred percent professional service, 24 hours a day 7 days a week. Our employees are of the highest standard, this is why CNS Electrical staff members are all subjected to background checks and are continuously updated in Australian Standards, Industry Codes of Practices and surpass all OH&S requirements.

CREATIVE Electrical Services

With over a decade of experience in the electrical maintenance sector, as a business, we have the creative knowledge to reduce your power consumption and in essence, save your business thousands each year.

Certified Staff

Understanding public liability and schooling protocol. All CNS staff undergo background checks and come with all certificates and safety licenses needed to undergo any task required by our clients. As a company, we ensure we are up to date with current legislations and OH&S practices.

CNS ELECTRICAL WILL SAVE YOU MONEY

Is your business 'burning' up more energy than it really needs?

Creating lighting efficiencies in your business is generally one of the easiest ways to reduce energy bills, as lighting accounts for a large portion of energy consumed.

In fact, in a typical office, lighting contributes to around 38% of all energy consumed. Depending on the business type, lighting efficiencies can reduce the power consumption for lighting by up to 50%.

When investigating lighting changes, CNS Electrical can identify opportunities and create a plan to increase energy efficiencies and decrease greenhouse gases. Every kilowatt hour saved in lighting can help reduce your global carbon footprint.

CNS Safety

As well as delivering the highest quality of work, our other focus is safety, safety amongst all our CNS Electrical employees and also within your business.

Emergency and Exit

The Building Codes and OH&S Act requires all Commercial and Industrial buildings to have installed Emergency and Exit lighting.

CNS Electrical can create a scheduled maintenance plan which will involve an inspection, testing and repair program which is performed every six months, in accordance with Australian Standards AS2293.2:1995.

Repairs / Maintenance to emergency lighting systems include replacing of tubes, batteries, control equipment or entire fittings.

With new installations / replacements, CNS Electrical use NEW LED Energy Saving fittings. As well as energy savings, these units use environmentally friendly NiMH batteries further reducing your impact on the environment.

RCD Testing

It is essential that all RCD's are inspected/tested on a regular basis at least every six months with a calibrated RCD tester. This ensures they operate as per required in AS/NZS 3760:2010 and reduce the risk of injury/fatality. CNS Electrical can create an ongoing maintenance plan which will involve inspection, testing and replacements if necessary.

Residual current devices - electrical outlet sockets

- (1) employer must ensure that, in relation to each electrical outlet socket at the employer's place of work, the circuit is protected by a residual current device.
